

A sustainable and economical solution to control flying insects indoors

The Titan[®] Omega uses 120 UV LED light emitters to efficiently attract flying insects and eradicate them using a high voltage killing grid. It requires limited maintenance and consumes only 26W of electricity, saving the end-user hundreds of pounds in electricity over the years compared with an equivalent model fitted with fluorescent tubes.

QBL LED

360°

UV LED

- Superior flying insect control through PestWest QBL UV LED technology.
- Always operational - Only needs the catch-tray emptying periodically.
- 3-year guarantee.
- Environmentally sustainable - No mercury content and high energy efficiency.
- Versatile - Can be installed wall-mounted, suspended or free-standing.
- Low maintenance cost - Requires just a replacement of the LED bulbs every 2 years.
- Fully certified to the relevant international legislation.
- No tool servicing.

TITAN® SPECIFICATIONS

DIMENSIONS

H: 29.5cm W: 35cm D: 13.5cm

WEIGHT

3.4kg

COVERAGE

Wall mounted: 80 – 90m²

Ceiling suspended: 160 – 180m²

POWER CONSUMPTION

26 Watt

FINISH

White

TUBE DATA

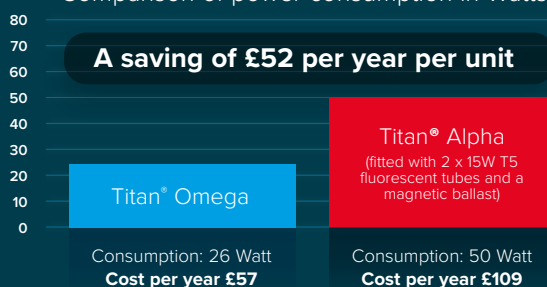

2 x 10W E27 QBL LED bulbs

Integrated LED driver

ENERGY SAVINGS

Comparison of power consumption in Watts

A saving of £52 per year per unit

*Calculated with an average cost of electricity for business users of £0.25 per kWh, with the recommended product usage, 24/7 operation.
